Anand Bagmar

Senior Quality Engineering Leadership

Quality Executive · Strategist · Software Quality Evangelist · 25+ Years

Open to: FTE · Fractional · Consulting & Advisory

linkedin.com/in/anandbagmar · @BagmarAnand

Strategic where it matters. Practical where it counts.

Quality Executive · Strategist · Automation Expert

Anand Bagmar is a software quality executive, keynote speaker, and test automation expert with over 25 years of experience leading quality strategy and transformation across complex technology environments.

His work spans quality assessments, roadmap definition, automation strategy, and hands-on implementation across telecom, e-commerce, gaming, SaaS, enterprise platforms, and banking/financial services. A Selenium and Appium contributor and creator of open-source tools used globally — and a regular conference speaker on software quality and AI-driven test automation.

Six pillars of measurable impact

1

Quality Leadership & Strategy

Quality operating models, governance frameworks, and risk-based practices aligned with business outcomes and delivery confidence.

2

Test Automation & AI Quality

AI-driven scalable automation for web, mobile, API, desktop, and visual testing — improving reliability across CI/CD pipelines.

3

Transformation & Advisory

Quality assessments, roadmaps, and contextual implementation — equally effective in short engagements and full programmes.

4

Training & Enablement

Workshops, bootcamps, and enterprise programmes — training hundreds of professionals on modern automation and AI adoption.

5

Framework & Tool Innovation

Creator of Teswiz, WAAT, and TTA — open-source tools adopted and trusted by the global testing community.

6

Cross-Functional Improvement

Works across product, engineering, and leadership teams to reduce friction and build scalable, sustainable QA capability.

Building tools the global QA community relies on

Teswiz

End-to-End Automation Framework

Open-source, scalable test automation framework for web, mobile (Android & iOS), API, and desktop. Built for real-world CI/CD integration and used globally.

✓ Web & Mobile (Android / iOS)

✓ API & Desktop Testing

✓ CI/CD Native Integration

✓ Globally Adopted

WAAT

Web Analytics Automation Testing

Dedicated framework for automated testing of web analytics implementations — ensuring accurate data collection and event tracking at scale.

✓ Analytics Validation

✓ Event Tracking Automation

✓ Automated Assertions

✓ Scalable Architecture

TTA

Test Trend Analyzer

Intelligent analysis of test execution trends — surfacing patterns in stability, flakiness, and coverage to drive data-informed quality decisions.

✓ Trend & Pattern Analysis

✓ Flakiness Detection

✓ Coverage Insights

✓ Data-Driven Decisions

How Essence of Testing creates value

01 Strategic Consulting

Practical, fit-for-purpose solutions leveraging AI and industry best practices — tailored to your product, team, and business goals.

02 AI-Powered Solutions

Adopt innovative AI tools to streamline testing, accelerate automation, reduce flakiness, and improve overall reliability.

03 Team Upskilling

Transform manual testers to automation-ready contributors. Deliver better ROI from your automation investment through structured programmes.

04 QA Community Engagement

Stay ahead with the latest practices, tools, and thought leadership — connecting with the global quality engineering community.

Practical skills for real-world quality challenges

1

Quality Strategy in the AI-Accelerated World

Workshop for managers: building product confidence when delivery is faster, more distributed, and AI-supported.

2

Boosting Automation with AI

Apply AI practically to make automation smarter, faster, deterministic and resilient.

3

Future-Ready Automation Frameworks

Design scalable, maintainable frameworks that grow with your product and teams.

4

Quality Metrics in the Age of AI

Track what truly matters — modern metrics for intelligent, data-driven quality decisions.

5

Test Automation Coverage & ROI

Measure what your automation truly covers and the business value it delivers.

6

Automation Framework 101

Learn the fundamentals of building robust automation for web and mobile applications.

7

Visual AI for Test Coverage

Expand and accelerate UI test coverage for web and mobile using Visual AI tools.

✦ **Custom programmes:** Workshops and training programmes can be tailored to your team's specific requirements, existing challenges, or technology stack.

Influencing quality engineering worldwide

25+

Years of QA Excellence

100s

Global Organisations

3

Open-Source Tools

Keynote Speaker

Regular speaker at major global testing conferences on quality, AI automation, and the future of QA.

Published Author

Thought leadership through published articles and community contributions on testing strategy and AI.

Open-Source Creator

Selenium and Appium contributor. Creator of Teswiz, WAAT, and TTA — tools trusted by the global QA community.

Keynote: Power Your Automation using AI

Upskilling 50 SDETs with AI-Powered Test Automation

DOMAIN

Gaming

TYPE

Classroom Training

DURATION

5 Weeks

SCALE

50 SDETs

Objective

- Upskill 50 SDETs to leverage AI tools and modern automation technologies
- Enable meaningful contribution to existing Test Automation Platform
- Accelerate the path to automation-ready contributors via practical training

Approach

- Rigorous classroom-based programme with customised curriculum
- AI-assisted automation, daily evaluations, and final projects
- Technical mentoring and feedback integrated throughout

Outcomes

- Transitioned testers from manual to automation-ready roles
- Confidence in writing, reviewing, and scaling test scripts with AI
- Multiple participants demonstrated leadership potential in automation

Reliance Jio: Transforming Quality Engineering at Scale

DOMAIN

Telecom · Retail · eComm · Media

TYPE

Assessment · Strategy · Impl.

DURATION

4.5 Years

SCALE

20+ Teams | 75+ SDETs

Assessment & Strategy

Reviewed existing practices, identified bottlenecks, and created an actionable roadmap aligned with business goals.

Automation Frameworks

Built reusable frameworks for web, mobile (Android/iOS), desktop, and APIs — integrated with Azure DevOps quality gates.

AI Visual Testing

Implemented AI-driven visual testing where applicable, improving the reliability of visual validations at scale.

QECC Establishment

Standardized tools, frameworks, and processes. Sourced, recruited, and trained 75+ SDETs with competency mapping and project integration.
